US VETERAN 1957-1966

PO Box 34063  
Omaha, NE 68134

We do not put .100 backer pads in our crown segments.

## CROWNS

Crowns end up being the best value when going thru steel, rebar, precast concrete.

Crowns usually do not come off.

Crowns core slower than a standard segment if going thru concrete / other aggregates.

Crowns are what we started this business with in 1980! We stock more types of crowns than any other company in the entire world. We have re-invented the CROWN many times since we started this business. We have types you have never seen before.

So if you need to keep the segment on a core bit, we have the problems solved. **crown it!**

You have the option in 3 sizes 5/8" - 7/8" - 3/4" to have either 5/8-11 top adapter or 1 1/4"-7. We build these here in Omaha so we can change, modify or what ever you need. We even build dry core bits with CROWNS.

Either size 5/8"-3/4"-7/8" ea \$99.00  
List

Need a larger size, just ask and we will quote you up to 8" with a crowned core bit.

This was one of our first dry cured core bits we built back in 1981. We are not afraid of trying to solve problems, and we continue to do that just for you the customer.
