Built for quickie saw, small walk behind up to 20hp.

* special deals available

LASER WELDED / DROP SEGMENTS for anti wear when cutting asphalt or green concrete. Laser welded will always give you longer life, than a sintered blade. You never see drop segments on a sintered blade. Here's what it will cut and yield great performance;

Cured concrete, concrete block, abrasive block (haydite), brick pavers, bluestone, limestone, roof tile, granite, pre-stressed concrete, and best of all ductile steel, and yes bundles of rebar not tied together.

This blade is the dream of a contractor that wants **"ONE"** blade that will do it all and stand up to the extreme treatment that it gets.

We have sold this blade for years and the increase in repeat orders keeps getting bigger each and every year.

Here's the best part, **our blade does not have a .100 segment base, (backer pad).** It basically has very little of a pad. When you see a part of the segment still on your blade and it won't cut any longer, you then find you paid for more than what you received. *Another way of selling you short.* **Obviously blades do not have to have a .100 pad.** Want more info on this subject contact us.
